TSCNET Services welcomes Slovak TSO as 14th shareholder

Munich, Germany – Munich-based TSCNET Services (www.tscnet.eu), one of the leading Regional Security Coordinators (RSC) for the European electricity transmission grid, is pleased to expand its group of shareholders: SEPS (Slovenská elektrizačná prenosová sústava, a. s.), the state-owned Slovak transmission system operator (TSO) for electricity, is now the fourteenth shareholder of TSCNET with an equal share of ownership, covering eleven European countries.

The Slovak transmission grid consists of 2.138 km of 400 kV lines, 826 km of 220 kV lines and from historical reasons also 80 km of 110 kV lines and is connected with four neighboring countries: Czech Republic, Poland, Hungary and Ukraine – Burshtyn island. With the exception of the Ukraine, all neighboring TSOs are shareholders and customers of TSCNET. SEPS is solely responsible for electricity transmission throughout the country.

"A quick glance at the map is enough to see that with SEPS' entry we are now completing the electricity security coordination in the central-eastern part of the continental transmission system" says Uwe Zimmermann, one of the two Managing Directors of TSCNET. "This move will further foster the security of supply in this region and underpins our ambition to further improve the already high quality of our security coordination services." As a shareholder with full voting rights, SEPS can now also actively contribute to steering and developing the service company.
